ION TRACK TECHNOLOGY

## LIFETIME OF PRODUCTS

Product identification: ipPORE™ track-etched membrane filters  
ipCELLCULTURE™ track-etched membrane filters

Practically, and as they are mainly made of an inert material, there is no lifetime limit for our products provided they are stored at room temperature and protected from the light.

However, it is recommended to use hydrophilic (PVP treated) ipPORE™ and ipCELLCULTURE™ products within 10 years after their production date.

In case of gamma sterilized products, their lifetime is limited to 2 years after the sterilization date.
